## Education

**Indian Institute of Information Technology, Jabalpur**

B.Tech in Computer Science and Engineering (CPI: 8.4)

Madhya Pradesh

Nov 2020 – Jun 2024

## Experience

### ZoloStays

Bengaluru, Karnataka

Platform Engineer - 2

Jul 2025 – Jul 2026

- Managed Kubernetes workloads for 40+ production applications on Google Kubernetes Engine (GKE), leveraging ArgoCD for GitOps-based deployments and troubleshooting production issues.
- Led PostgreSQL major-version upgrades for 2 production Cloud SQL instances, ensuring successful upgrades through backup, validation, and rollback planning.
- Developed AWS Lambda functions triggered by EventBridge and Cognito to execute scheduled API calls and send OTP notifications via the Gupshup API, reducing per-OTP SMS costs by 60%.
- Configured IAM roles and policies to implement secure access control across AWS services and utilized Amazon CloudWatch for centralized monitoring, log analysis, and production troubleshooting.
- Provisioned and managed cloud infrastructure using Terraform, enabling automated, consistent, and repeatable infrastructure provisioning across AWS and GCP.
- Built GitLab CI/CD pipelines and Dockerfiles to automate application builds, testing, container image publishing, and deployments across development and production environments.
- Built an approval-based workflow using GCP Cloud Functions to automate production database query execution while enforcing controlled production changes.
- Configured Google Cloud Armor policies to mitigate DDoS attacks and secure production services.
- Developed Prometheus alert rules and Grafana dashboards to improve application and infrastructure observability, reducing incident detection time.
- Participated in the on-call rotation, responding to Zenduty alerts, investigating production incidents, and ensuring timely service recovery.

Platform Engineer

Jan 2024 – Jun 2025

- Improved platform observability by integrating Datadog and the EFK stack, and managed Datadog alerts to enhance monitoring and incident response.
- Optimized cloud infrastructure costs by right-sizing compute resources, improving infrastructure utilization, and maintaining production reliability.
- Managed 30+ Google-managed SSL certificates for production services, ensuring secure HTTPS communication.
- Configured Serverless VPC Access for GCP Cloud Functions to securely connect with internal services.
- Developed a Python script to monitor SSL/TLS certificate expiration and automatically send email alerts before certificates expired.
- Reduced API response time by 30% by optimizing database queries, implementing caching strategies, and introducing pagination for high-volume endpoints.

## Projects

### Secret Management Service | Spring Boot, PostgreSQL

- Designed and developed an internal secret management platform to securely store and manage database credentials, API tokens, and platform secrets, used by 30+ engineers and replacing ad hoc credential sharing.
- Implemented fine-grained authorization using permission-based access control and direct user-secret mappings, enabling secure access based on user responsibilities and assignments.
- Implemented Google OAuth 2.0 with server-side ID token verification and JWT authentication.

## Technical Skills

**Languages:** Java, JavaScript, Python, Bash, C++

**Technologies/Frameworks:** Spring Boot, Microservices, Hibernate, Node.js, REST APIs

**Databases:** PostgreSQL, MySQL, MongoDB, Redis

**Cloud & DevOps:** AWS, GCP, Kubernetes, Docker, ArgoCD, Terraform, Datadog, Prometheus, Grafana, Kibana

**Messaging & Tools:** Kafka, Amazon MQ, Debezium, Git, Linux, kubectl
